

GREEN AIR
PROTECTOR

AT GREEN AIR

PRODUCTS U.K. we take a very different approach to growing. We understand plant biology and through our research program, we have put together a range of very special and unique products that deliver superior results time and time again.

Taking the vital elements of successful plant growth in the world's most thriving foliage environments, we have distilled the key ingredients into both the record breaking Green Man System© and the quite literally earth moving Genesis Formula© nutrients.

GREEN·MAN

SYSTEM

THE

Green Man System is a unique and versatile combination growing system; it was designed and manufactured by us at Green Air U.K. to grow trees...BIG TREES.

The Green Man System can be a single pot or a multi-pot growing system. Whichever way you choose to use it, is so easy that the plants seem to grow themselves. Overall benefits are a huge reservoir tank with a 40 Litre root growing capacity, means your pot will never become root-bound, the roots will always be able to breathe, even on a 7ft plant. The pot has it's own unique design features, such as the sloping bottom, making sure that every drop is drained during the water change, eliminating the risk of concentration. A 4" internal pocket that will hold your airstone snug in place, a fill line to indicate the perfect depth for your nutrients, An inspection flap that allows you to check both the level of your reservoir tank along with the condition of your roots, This flap also aids the release of warm gasses from the reservoir tank, should your room overheat, helping prevent any issues within the root system. The White basket will reflect light and heat, keeping your reservoir tank at a cooler core temperature. The heel design on the pot ensures your system is never sitting on a cold concrete floor, with vents allowing the air to move freely under the pot. Corners on pot allow air pipe to sit firmly in place and never kink. Multiple drainage holes in the top basket, preventing any blockages from the rapid and explosive growth. Couple this with a unique groove system in the basket, ensures your plant establishes a firm grip for unrivalled, strong and sturdy growth.

The watering ring keeps roots nice and moist with massive water - air ratio using a specifically designed combination of materials and pipe gauges along with larger dripper holes; mixing the maximum amount of air into your nutrient solution, keeping your water fresh and your plants oxygen rich. The drip-feeding column connects to any air pump, making it easier to connect up and run a grow system of any size with the right sized pump. Link them up or just use one, either way you'll find this system a delight to work with and likely to get the best yields you've ever seen. The Green Man system looks great too, you'll be proud to have it in your grow room.

The Green Man System is a combination system, combining deep water culture, aeration dripper and a flood and drain system, maximising each unique characteristic for each method of growing into one complete super-system. Not only is The Green Man System the perfect growing method for your plants, it's the only system on the market that uses air to move the water through the pumping column whilst simultaneously oxygenating each individual pot, making it easier to use, with less, fuss, less wires and less electricity.

The Green Man System can be pared back to function simply as a large capacity flood and drain system. Using the unique Green Man tray insert you can fill up your pots with a 60/40 mix of coco & pebbles or soil & pebbles.

Whichever way you choose to grow The Green Man System is proven to deliver results, BIG results.

GROW TREES... BIG TREES

REFLECTIVE white inner basket, built and designed to hold huge plants comfortably whilst deflecting heat. The combination of the drainage holes and retaining grove system keeps your plants hydrated, fed and held firmly in place.

POT SYSTEM SINGLE

OXYGENATING wide gauge dripper ring, feeding your plants from the top as well as the bottom using the highly oxygenated nutrient solution pumped up from the reservoir below.

LARGE inspection flap for essential nutrient maintenance whilst allowing warm gasses to easily flow out of the reservoir. With Airline channels eliminating any chance of kinks or compression in the 4mm Airline hoses.

HUGE 40L root zone capacity.

SLOPED heel base, draining every last drop of nutrient.

VENTED raised base prevents the nutrient solution contacting the floor of your grow space and allowing warmer air to flow under your pot.

inside

AIRSTONE pocket, holding a 4" airstone firmly in place, reducing noise.

THE BRAINS OF THE OPERATION

REFLECTIVE white lid to keep out debris and to disperse heat.

UNIQUE pump connection socket, keeps your Green Man reservoir tank pump securely fastened to the control unit.

DRAIN outlet connecting to your reservoir tank.

FILL inlet to connect to your reservoir tank.

PRECISION engineered Grasslin timer as standard. Keeping your feeding program running like clockwork everytime.

TAILORED on board electronics developed specifically for growing multiple specimen plants.

MULTIPOT connectivity, multiple Green Man System units can be run effectively from a single brain controller.

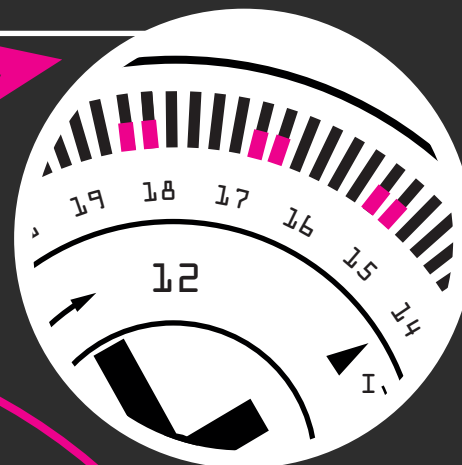

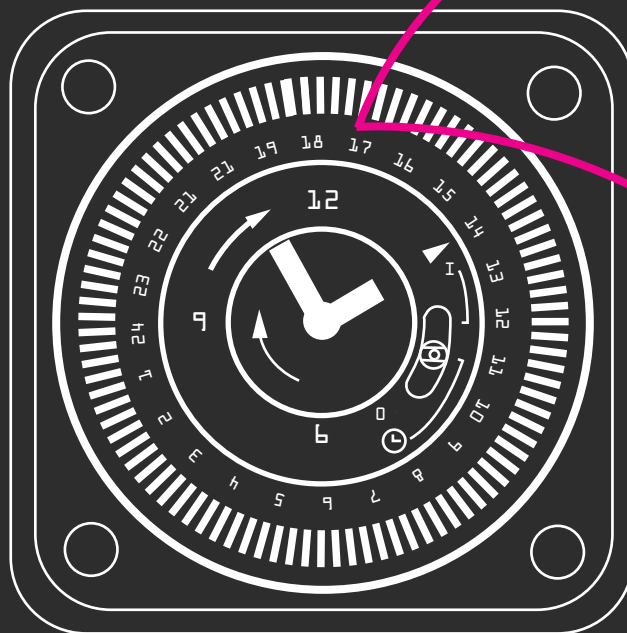

inside

SILENT running pumps fitted to each brain controller and Green Man reservoir tank.

COMBI SYSTEM TIMER SETUP

SUMMER FEEDING

THE Green Man Combi System feeds from both the top using a drip ring, the bottom in an oxygenated reservoir whilst flooding and draining to ensure correct nutrient levels are maintained and consistent throughout the entire system.

During the Summer months, set your timer to feed for an hour at a time and then drain the system back to the reservoir for 30 mins. Set your clock to

2 DOWN / 4 UP

Follow this timing pattern around the clock, establishing a set and regular routine for your plants.

WINTER FEEDING

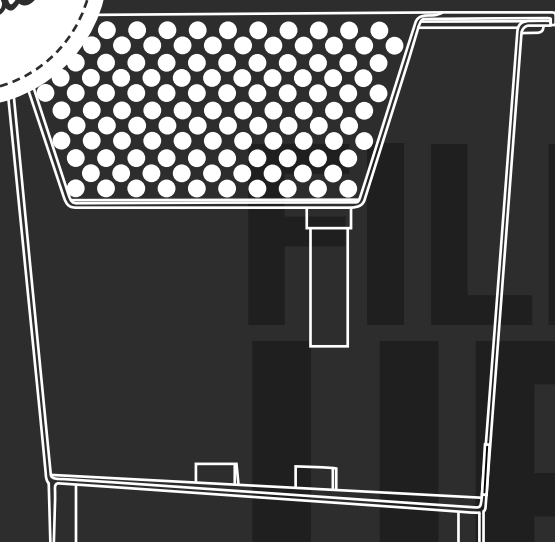

WHEN growing in the winter months it is advised to feed your plants for extended periods of time. Keeping the pots flooded for 2 hours and then returning your nutrient solution to the reservoir for 30 minutes.

Set your clock to

2 DOWN / 8 UP

Follow this timing pattern around the entire clock, establishing a set and regular routine for your plants.

substrate
guide

FILL UP THE BASKET WITH CLAY PEBBLES

When using the Green Man System as a self-feeding, combination system, fill your inner basket to the brim with high-quality, pH neutral clay pebbles. The pebbles provide superior drainage, letting the nutrient solution coat the root ball from the top down whilst giving your plants a firm base to latch onto and work the roots around into the oxygen filled pockets between the stones. Being a totally inert media they'll be no interference with either your pH levels or your EC readings.

FLOOD

& Drain systems work by flooding each pot simultaneously, allowing the plant to feed for the set duration on the timer. When the timer switches, the brain pulls the entire nutrient back from the pots and into the reservoir. This keeps your nutrient solution balanced and consistent throughout the feeding program, ensuring uniform feeding to each plant.

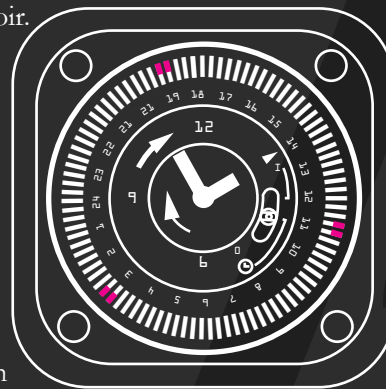

To begin your plants' growing cycle we recommend first setting your timer to feed **TWICE** every 24 hours for the **FIRST WEEK**. This lets your young plants acclimatise to their surroundings and begin to establish root growth without over feeding.

Set your clock to:
2 UP / 46 DOWN

FOR

weeks **2-3** after your plants have adjusted, you can begin to increase the uptake of fertiliser in your plants. Changing your timer to feed 3 times every 24 hours.

Set your clock to:
2 UP / 30 DOWN

FOR

weeks **4-END** set your clock to

2 UP / 22 DOWN

Feeding your plants 4 times every 24 hours.

IMPORTANT

Never let your reservoir run below 1/4 of full capacity.

When first using your system and after each water change ensure that there is no airlock between the brain and the pots -
DO NOT LEAVE UNTIL SYSTEM IS FULLY OPERATIONAL.

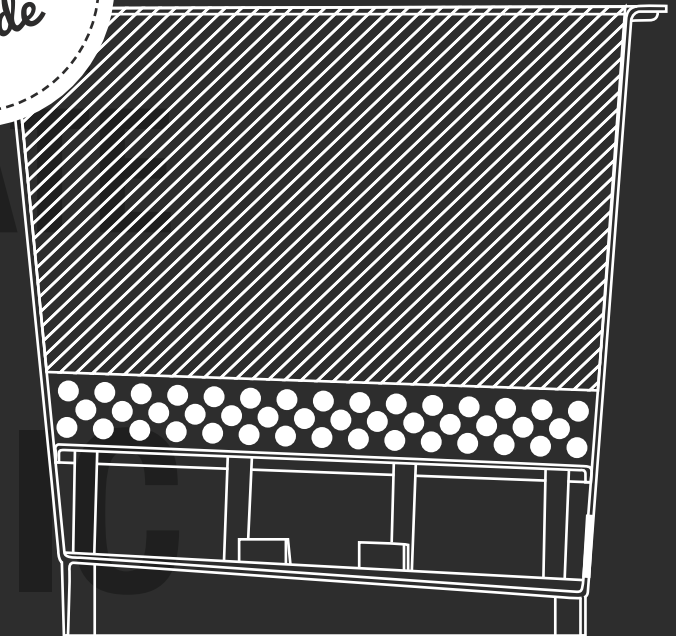

FOLLOWING

these feeding times will provide your plants with the correct amount of nutrition according to its development, resulting in healthier plants and much higher yields than with any other Flood & Drain system.

USE THE SUBSTRATE TRAY FOR ORGANIC MEDIA

Working with a Flood & Drain system requires a different set of rules to the combination system. Insert the Green Man Substrate tray at the bottom of each pot, load about 1" of clay pebbles on top of the tray then fill to the brim of the pot with your choice of organic media. Soil and Coco work best or use a 60/40 mix of pebbles and organic media to increase drainage and oxygen circulation.

substrate guide

FLOOD & DRAIN TIMER SETUP

COMBI SYSTEMS

The flagship
in the Green

Man product line and a favourite with growers who like precision. The combination system is totally smashing it when it comes to both yield quantity and quality; this is down to the unique design and functionality of the Green Man system. The combi system works by feeding from both the top and the bottom, using an oxygenating dripper ring that pulls more oxygen into the nutrient solution as it's being pumped up through the pumping column. Whilst feeding the roots from its huge capacity reservoir below, oxygenated by using a 4" airstone in each pot. The system runs on air power from a central air pump, limiting the amount of electricity being used in your grow room, whilst keeping noise levels at a minimum.

Each pot has a sloping, raised base that drains each pot entirely of all nutrient back to the central reservoir, mixing up all of your nutrients in the complete system, letting you keep complete control of your nutrient levels with exact accuracy, without any build up, Whilst keeping your nutrient temperature stable.

**TOTALLY
SMASHING
IT**

GREEN MAN 1 Single pot system, comes with the base pot, inner basket, pumping column, water ring, sealing gland, pipe clip and translucent inspection pipe. This little powerhouse will super charge your grow room.

GREEN MAN 2 Double pot, self watering system with Green Man Brain Controller, two complete combi pots, Iceline Pipe and 100L reservoir tank. Available in both hard tank and flexitank options.

GREEN MAN 4 Four pot, self watering system with Green Man Brain Controller, four complete combi pots, Iceline Pipe and 250L reservoir tank. Available in both hard tank (250L) and flexitank (225L) options.

GREEN MAN 8 Eight pot, self watering system with Green Man Brain Controller, eight complete combi pots, Iceline Pipe and 250L reservoir tank. Available in both hard tank (250L) and flexitank (225L) options.

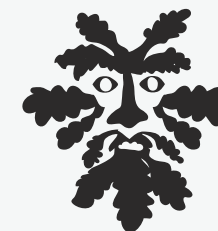

GREEN MAN 3 Triple pot, self watering system with Green Man Brain Controller, three complete combi pots, Iceline Pipe and 100L reservoir tank. Available in both hard tank and flexitank options.

GREEN MAN 6 Six pot, self watering system with Green Man Brain Controller, six complete combi pots, Iceline Pipe and 250L reservoir tank. Available in both hard tank (250L) and flexitank (225L) options.

GREEN MAN 12 Twelve pot, self watering system with Green Man Brain Controller, twelve complete combi pots, Iceline Pipe and 350L reservoir tank. Available in both hard tank (350L) and flexitank (400L) options.

GREEN·MAN SYSTEM

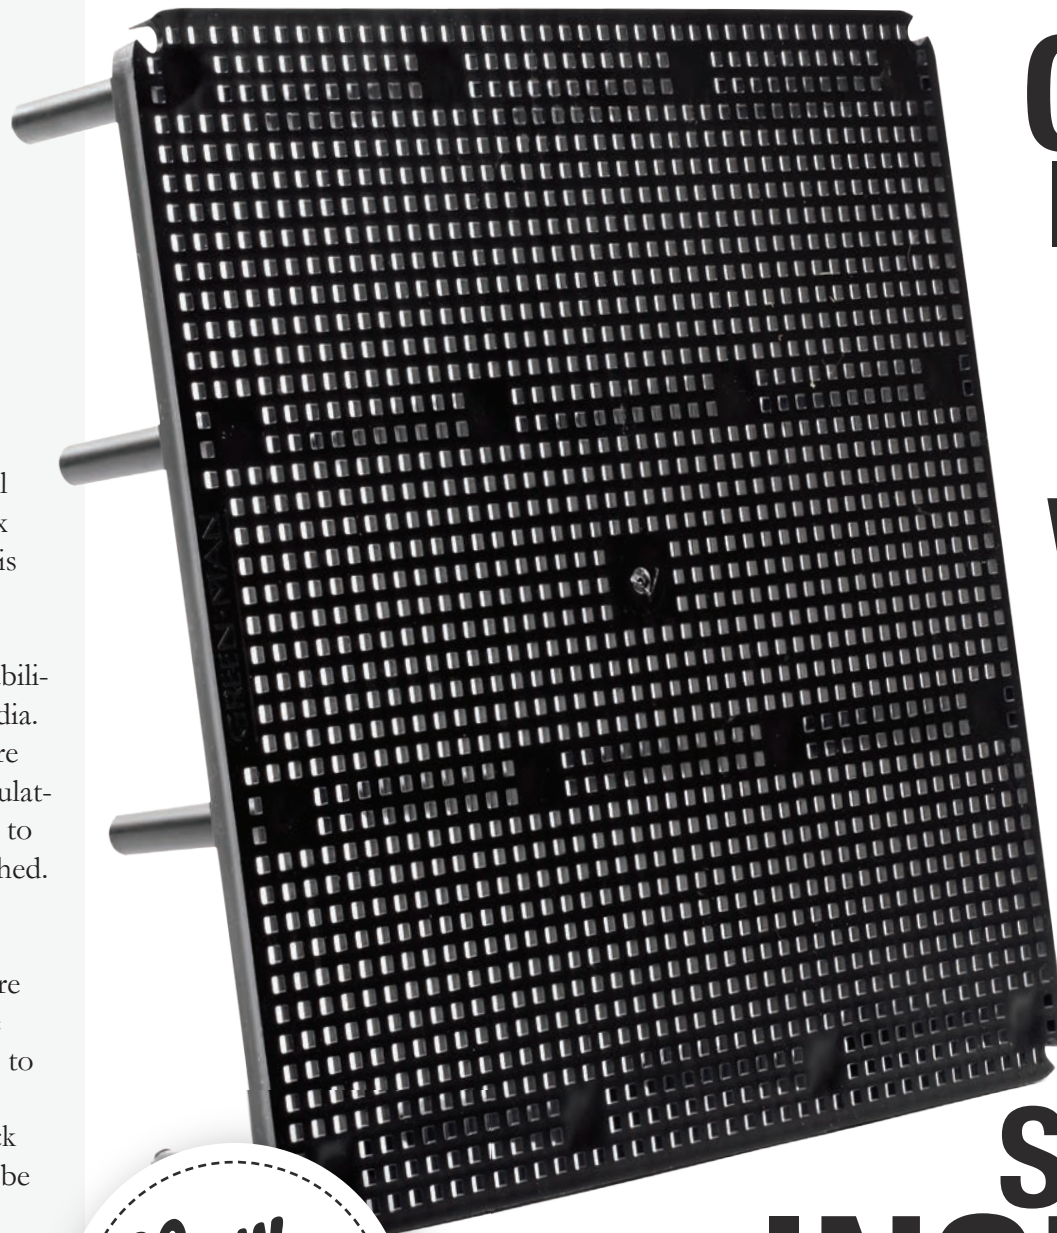

*inside
info*

THE 12th RULE The more, the merrier right? Not always! Here at Green Air, we've seen that growers stick to a maximum of 12 pots connected to a single reservoir for optimal growth.

FLOOD AND DRAIN SYSTEMS

The Green Man System can be converted and used as flood and drain system for using organic media. Using the substrate tray in the bottom of the pot, you can fill up the pot with soil, coco or a mix of substrate to your choosing. This way you can benefit from the incredible precision the Green Man System offers with all the stability of growing in organic inert media. Growing this way tends to be more forgiving by keeping the roots insulated and feeding at regular intervals to ensure your plants are well nourished. It works by flooding all the pots connected to your reservoir for capillary action to take place, where the nutrient solution is held in the media ready for your plants' roots to take up. The nutrients are then drained back, mixed then sent back out to the pots for the process to be repeated. The Green Man System does all of this for you, fully automated and programmable; it's never been easier to grow massive crops with full and fruitful yields. The quality speaks for itself.

COMPONENTS FOR GROWTH

Critical when investing in any grow system is component products that keep everything running ship shape and on time. More than that, this selection of bits and pieces contains everything you could need to expand and customise your Green Man System to suit your exact growing requirements and expand your system with your growing needs.

GREEN MAN BRAIN UNIT

Brain unit controller for all multi-pot Green Man grow systems. Comes with a 12 month warranty.

GREEN MAN POT

Bare single pot, use to expand your system or build your own system to fit your room.

GREEN MAN INNER BASKET

Inner basket to fit Green Man System pots. Engineered to cater for large plants.

GREEN MAN SUBSTRATE TRAY

Substrate tray used in Green Man flood and drain systems, turn your combi system into a flood and drain system.

13mm T-SECTION

13mm T-section fits into the sealing gland at the front of the pot. Use to make your system huge.

13MM STRAIGHT

13mm straight section, fits into the front section of the Green Man System pot.

GREEN MAN PIPE CLIP

Secures the inspection pipe to the pot front. For use on a single pot setup.

ICELINE PIPE ROLL (30m)

Double walled, two tone pipe line. White outer wall reflects heat, black inner wall insulates.

GMCOM1002	GREEN MAN PUMP COLUMN
GMCOM1004	GREEN MAN SEALING GLAND
GMCOM1005	13mm ELBOW

GREEN MAN WATERING RING

Unique oxygenating water ring with Green Man branded T-piece. Fits to the water pumping column.

GREEN MAN PUMPING COLUMN

The Green Man water pumping column is fully air powered and connects to the watering ring.

GREEN MAN SEALING GLAND

Screws onto the pot with rubber seals and forms a compression fit to all Green Man connectors.

13mm ELBOW

13mm elbow connector, fits into the sealing gland with the barbed end fitting into your pipe line.

GREEN MAN INSPECTION PIPE

Blue translucent inspection pipe with 13mm elbow section for single pot systems.

Available In:
100L,
250L, 350L

GREEN MAN HARD RESERVOIR TANKS

Fully kitted out and ready to connect to your Green Man System brain, including a Sicce silent 1350 water pump with unique connection plug.

Available In:
100L,
225L, 400L

GREEN MAN FLEXI RESERVOIR TANKS

Fully kitted out and ready to connect to your Green Man System brain, including a Sicce silent 1350 water pump with unique connection plug.

GREEN·MAN SYSTEM

HAILEA TWIN PUMP

2-way air pump to control a single pot, one airline for the airstone and another to power the pumping column.

ENVIRO SERIES ET30

Powerful, quiet running air pump. Strong enough to run upto 3 pots/6 Airlines.

ENVIRO SERIES ET40

Powerful, quiet running air pump. Strong enough to run upto 6 pots/12 Airlines.

ENVIRO SERIES ET60

Powerful, quiet running air pump. Strong enough to run upto 9 pots/18 Airlines.

ENVIRO SERIES ET80

Powerful, quiet running air pump. Strong enough to run upto 12 pots/24 Airlines.

ENVIRO SERIES ET100

Powerful, quiet running air pump. Strong enough to run upto 36 Airlines.

ENVIRO SERIES ET120

Powerful, quiet running air pump. Strong enough to run upto 48 Airlines.

IT'S IN THE AIR

With the Green Man System it's all about air power and distributing it to the right places at the right kind of pressure. So we've put together these amazing steel manifolds that attach to your

airpump and split the airflow along each connection. The air pressure can be tweaked and adjusted for each line using the tap with complete precision and accuracy. Keeping your system running at optimum pressure for consistent feeds and a perfectly oxygenated nutrient solution.

6-WAY STEEL MANIFOLD

Steel construction throughout with a precision tap for each connection.

8-WAY STEEL MANIFOLD

Steel construction throughout with a precision tap for each connection.

12-WAY STEEL MANIFOLD

Steel construction throughout with a precision tap for each connection.

18-WAY STEEL MANIFOLD

Steel construction throughout with a precision tap for each connection.

24-WAY STEEL MANIFOLD

Steel construction throughout with a precision tap for each connection.

4" AIRSTONE

This airstone fits neatly into the pocket at the bottom of the Green Man pot base.

4mm AIRLINE PIPE

4mm clear silicone air hose comes on 200m rolls. Slots into the corner recesses of the Green Man pots to prevent any kinks or blockages.

Grasslin Mechanical Timer (plug in)

Grasslin are the figureheads of reliability, precision mechanical timer that will never fail. Easy to operate timer in 15 minute segments.

GENESIS FORMULA NUTRIENT SYSTEM

NATURE is always at the forefront of cutting edge plant growth technology. The Genesis Formula Nutrient system distills the finest elements available on planet Earth into a complete, intermixable nutrition collection that provide your plants with everything it needs to thrive. Use each component nutrient to tailor your solution to suit your growing style and your plant strain along each stage of it's development; making your plants massive, your buds huge and your fruits delicious.

GENESIS FORMULA 3 PART

NUTRIENTS

MICROBASE GROW BLOOM MIX TOGETHER FOR SERIOUS YIELDS

FEED CHARTS AVAILABLE ONLINE

MICROBASE is the base for the whole formula, full of trace elements and high in Potassium and Phosphates, Microbase contains the essential nutrients needed to cultivate healthy, vigorous plants. Designed for use during each stage of your plants development along with either Genesis Formula Grow or Bloom.

NPK: 3,10,19

GROW NUTRIENT #2 is specially formulated for rapid growth and accelerated branching. It's blended with fast acting ammoniacal nitrogen plus calcium for strong, healthy and thriving plants.

NPK: 15,0,8

AVAILABLE IN

QUARTS, GALLONS & 2.5 GALLONS

BLOOM NUTRIENT #3 promotes flowering and provides additional phosphorus essential for strong bloom, rapid floral development, fruit yield and high quality fruits and vegetables. Use with Microbase for complete nutrition during flowering or as a supplement with Grow Nutrient #2 to stimulate root development during the plant's vegetative cycle. Bloom Nutrient #3 is also excellent when used with Microbase for seedlings and cuttings. Designed with high phosphorus, potassium and calcium content to encourage bud formation, bloom and root growth.

NPK: 6,15,17

STRONGER STURDY STEMS INCREASES RESILIENCE TO TEMPERATURE

FEED CHARTS AVAILABLE ONLINE

LIQUID SAND is a Potassium - Silicate Supplement that enhances cell structure and plant development, resulting in broader, thicker, leaves; increasing photosynthesis. It boosts plants immune system as well as enables the root system to withstand higher temperatures and drought.

The power of Liquid Sand can be seen as you plant grows, especially in the central stem, it'll become thick and rigid like a massive straw taking up feed at an increased rate. Add to your feed regularly through your feeding cycle and see a huge transformation in plant quality. You'll need the added plant strength to support the volume and weight of bud when using The Genesis Formula.

**AVAILABLE IN

SUPPORTS PLANT VITALITY WHILST PROTECTING FROM PESTS AND DISEASES

PRO-TECT is an essential vitality additive that encourages root development and helps maintain a dense, healthy rooting system. Expect rapid root growth and the prevention of root rot; this increases the resilience and overall health across the entire plant. Pro-Tect is a 100% organic formulation and can be used throughout the entire grow cycle, either within the feed or applied as a foliar spray. Like all Genesis Formula products Pro-Tect is made up of essential pure minerals, providing your plants with natural elements with nothing artificial added. Ensuring that your harvests taste as great as they smell.

GENESIS FORMULA A / COCO TWO WAYS TO B KING

GENESIS Formula Coco fertiliser is specifically formulated to optimize plant response in coconut coir growing medium. Every grow medium has its own unique characteristics regarding water, oxygen, nutrient retention and buffering qualities. Coconut coir is an excellent choice of substrate. Coir has a high cation exchange rate, which means that an improved mineral balance is maintained and readily available for uptake. The Genesis Formula premium coco blend enhances these beneficial properties.

When parts A and B are mixed together the fertiliser contains a balanced composition of trace and micronutrients, along with the specific ratio of essential elements to accelerate plant growth and health in coco coir.
